Q 20). **Read the case study given below and answer the questions that follow:**

India has one of the second largest road networks in the world with a total length of about 56 lakh km (Annual Report 2017-18). About 85 per cent of passengers and 70 per cent of freight traffic are carried by roads every year. Road transport is relatively suitable for shorter distance travel. Road transport in modern sense was very limited in India before World War-II. The first serious attempt was made in 1943 when 'Nagpur Plan' was drawn. This plan could not be implemented due to lack of coordination among the princely states and British India. After Independence, twenty-year road plan (1961) was introduced to improve the conditions of roads in India. However, roads continue to concentrate in and around urban centres. Rural and remote areas had the least connectivity by road. For the purpose of construction and maintenance, roads are classified as National Highways (NH), State Highways (SH), Major District Roads and Rural Roads.

The main roads which are constructed and maintained by the Central Government are known as \_\_\_\_\_.

- (A) National Highways
- (B) State Highways
- (C) District Roads
- (D) Rural Roads

Correct Answer: (A)
